colour palette

Each customer theme in **risr/advance** is composed of 5 different colours, each with 9 unique shades. These colours are then used to give semantic meaning to the various elements and page components in the application.

The default colours are designed to meet WCAG 2.1 contrast ratios at the AA level. Sufficient contrast is essential to make page elements distinguishable and easy to find.

Each customer can create their own 5-colour palette with the help of [Chromasome](#) to ensure that the combinations are AA accessible.

risr/advance default colour palette

Primary

Usage:

- Dashboard widget headers

Danger

Usage:

- Page buttons
- Information dialogues

typography

Good typography helps establish hierarchy and structure, helping the reader identify and understand the important content on each page.

risr/advance uses DM Sans as the brand font throughout the application. DM Sans is a clean and legible font, while keeping a modern look.

Light 300
